The Vineland-3 is a standardized measure of adaptive behavior--the things that people do to function in their everyday lives. This report compares the results from two or more Vineland-3 Parent/Caregiver Forms administered at different times. Please see the Vineland-3 Manual for guidance on interpreting this report.

Subdomain GSV scores are compared for statistically significant changes between the two most recent administrations. Shaded cells indicate that a GSV change is significant at  $p < .05$ , two-tailed. If no cells are shaded, there are no significant changes. Only the GSV scores are compared for statistically significant changes.
