[2.0 / RE1 / QG1]

Score Summary

Classification
Not At Risk for Dyslexia

SUMMARY RESULTS

The Shaywitz DyslexiaScreen is a teacher rating scale of language and academic risk factors that indicates whether a student may be at risk for dyslexia. The results of the Shaywitz DyslexiaScreen alone are not sufficient to diagnose or rule out dyslexia; however, the results provide a reliable and valid indication of risk for dyslexia based on teacher ratings.

The teacher ratings indicated risk for dyslexia on 3 out of 10 items: 0 items pertaining to language concerns and 3 items pertaining to academic concerns. To be classified as "At Risk for Dyslexia", the teacher's ratings must indicate a sufficient level of risk on enough items to meet the cut score. Therefore, the results of the Shaywitz DyslexiaScreen suggest that Emily is Not At Risk for Dyslexia.

SAMPLE

Item Responses

Bolded items met the criteria for being at risk for dyslexia.

Language

1. Have trouble identifying letters or numbers? (Rarely)

Academics

- 2. Complete work satisfactorily? (Sometimes)**
