INTERPRETATION OF SCORES

The WRMT-III's Total Reading cluster is an estimate of the examinee's overall reading achievement and is made up of the Oral Reading Fluency test, and the tests that make up the Basic Skills and Reading Comprehension clusters. The Oral Reading Fluency test measures the degree to which an examinee reads accurately and fluently, the Word Identification and Word Attack tests measure an examinee's ability to read real words and to decode nonwords, and the Word Comprehension and Passage Comprehension tests measure an examinee's abilities to read and understand words and connected text. Finally, the Listening Comprehension test may provide additional insight into the examinee's comprehension ability when reading is not required.

Student's cluster scores fall into the following RPI proficiency categories:

-Extremely Difficult: Basic Skills
 Reading Comprehension

-Very Difficult: Total Reading

Student's test scores fall into the following RPI proficiency categories:

- Extremely Difficult: Rapid Automatic Naming
 Word Identification
 Word Attack
 Word Comprehension
 Passage Comprehension

- Very Difficult: Oral Reading Fluency

- Difficult: Phonological Awareness

- Manageable: Listening Comprehension

Student was administered the following out-of-level tests, for which only limited scores are available:

- Letter Identification

ORF RATINGS

- Expression: 1**
- Rarely reads with expression or enthusiasm.
 - Rarely reads with what sounds like natural language.
 - Consistently reads in a quiet voice.
- Phrasing: 1**
- Reads word-by-word with little sense of phrase boundaries.
 - Rarely uses stress and intonation to mark the ends of sentences and clauses.
- Smoothness: 1**
- Consistently reads with difficulty, resulting in frequent and disruptive breaks in flow.
 - Rarely uses self-corrections to resolve word and structure difficulties.
